

Dynamics 365 Solutions

Armanino – Microsoft Dynamics 365 Advanced Warehousing Overview

Advanced Warehouse module design and flexibility:

- Adv. Warehouse module is a query-based WMS designed to build rules for each business process
- Adv. Warehousing is designed to maximum user productivity and reduce user decision making, while minimizing inventory movements.
- WMS can be implemented quickly with broad rule sets or built out with specific rules
- Queries can be built to leverage information across the platform with Advanced Queries joining SQL tables
- WMS includes a dedicated WMS App to support data validation with barcode scanning
- WMS supports inbound/outbound distribution and logistics, general inventory management practices, and production control (Discrete, Process, and Lean)

- Competes with Tier 1 WMS Solutions without the issues related to having a WMS Interface
- Seamless Inventory Transacting across the system, especially in Manufacturing
- Over 60 Features released since late 2019, including:

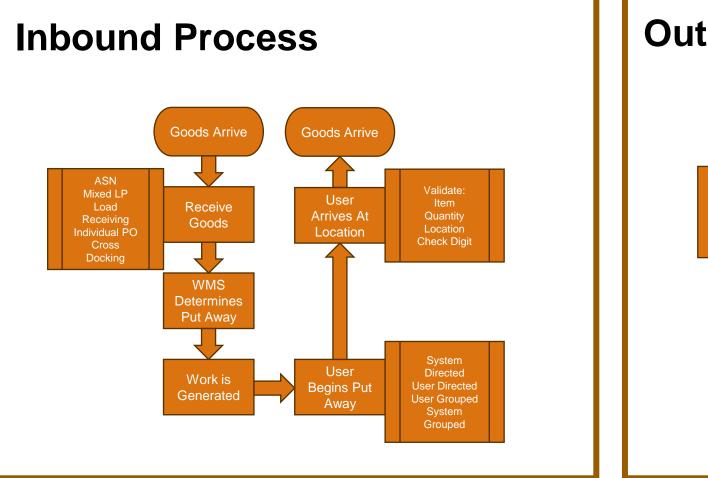

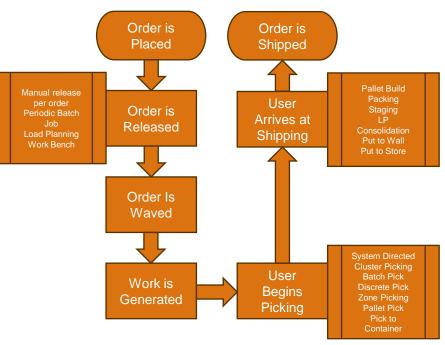

- Warehouse Management Concepts
 - License plate (LP) Moveable Inventory Dimension below Location
 - Location Profiles and Zones Location Characteristics and Grouping Mechanism
 - Reservation Logic Order Level and Work Level
 - Location directive What, How Many, and Where
 - Wave template Mechanism for Grouping Orders Together for Processing
 - Work template How we complete the Work
 - RF configuration Flexible and can be User Specific
 - Inventory status dimension Available, Quarantine, Inspection, etc.

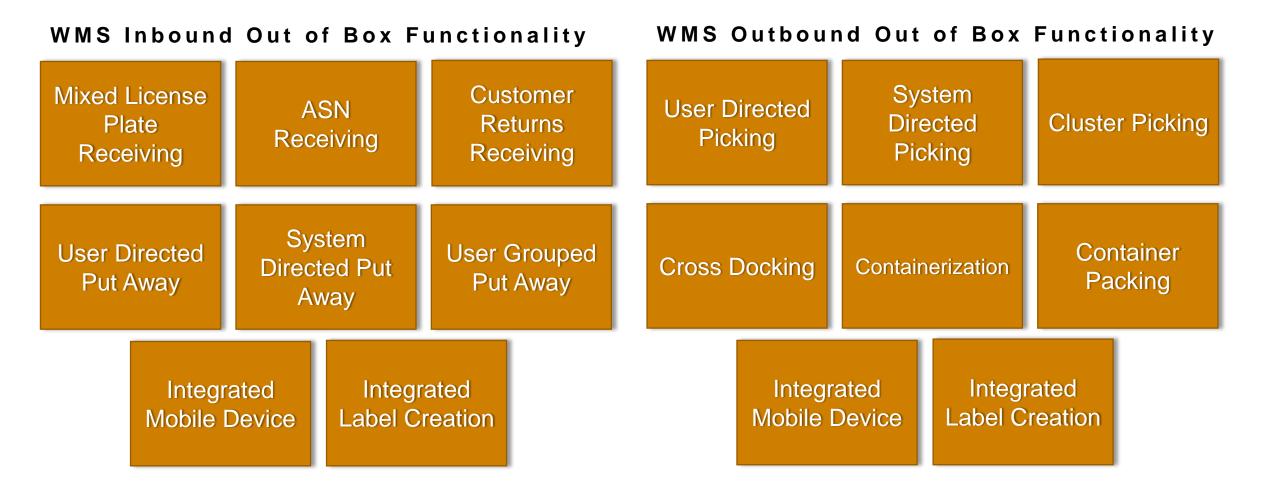

Outbound Process

WMS Miscellaneous Inventory Out of Box Functionality

Loca	ocation to Location lovements			Item Consolidation Planning		Inventory Status Adjustments		Integrated Quality Control		Labor Standards		
Min/Max Based Replenishment		Zone Based Replenishment		Wave Based Replenishment			Cycle Count Plans		Threshold Based Cycle Counts		Inventory Adjustments	
Integrated Mobile Device		Integrated Label Creation			User Directed Cycle Counting		System Directed Cycle Counting					

WMS Production Out of Box Functionality

Discrete, Process, and Lean Manufacturing	User Directed Picking	System Directed Picking	Repo	Mobile Device Report As Finished		Batch Tracking Report as Finished		Serial Number Report as Finished	
Wave Based Raw Material Allocation	Resource Based Inventory Movements	License Plate Staging		User Directed Put Away		System Directed Put Away		Cross Docking	
Nega Inven Supp	tory Produ	iction	Mol Mate Consu		erial Pro		Device ction d		

SCENARIO 1

Let's start with....

Material Demand from multiple floors of a Hospital building.

- Provide a variety of Items and Quantities
- Provide a variety of Units of Measure (ea, case, PL)

What we want to accomplish... •

- Utilize different styles of picking
- Fulfill for the Various Floors of the Hospital
- Reduce errors with System-directed picking to fulfill the demand orders

With Dynamics 365 SCM Warehouse Management, we'll show...

Cluster Picking

SCENARIO 2

With material <u>on the way</u>...

Put-away the material to the Supply rooms or closets on each floor

What we want to accomplish...

- Provide an easy, intuitive way for staff members or associates to receive the goods
- Reduce the amount of paperwork in the process
- Maintain an accurate count of inventory

With a Power App integrated to Dynamics 365 SCM Warehouse Management, we'll show...

A mobile application that quickly executes these material put-away activities and confirms transactions with the back-office

SCENARIO 3

With material <u>on-hand</u>...

We need to consume material for use on the hospital patient floors or operating rooms

What we want to accomplish...

- Provide an easy, intuitive way for staff members or associates to consume material, track usage and align charge codes
- Reduce the amount of paperwork in the process
- Maintain an accurate count of inventory
- Automatically trigger re-orders or Request re-supplies

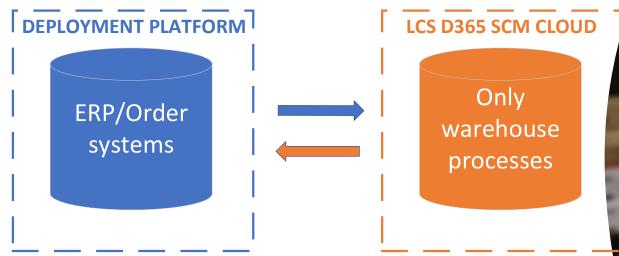

With a Power App integrated to Dynamics 365 SCM Warehouse Management, we'll show...

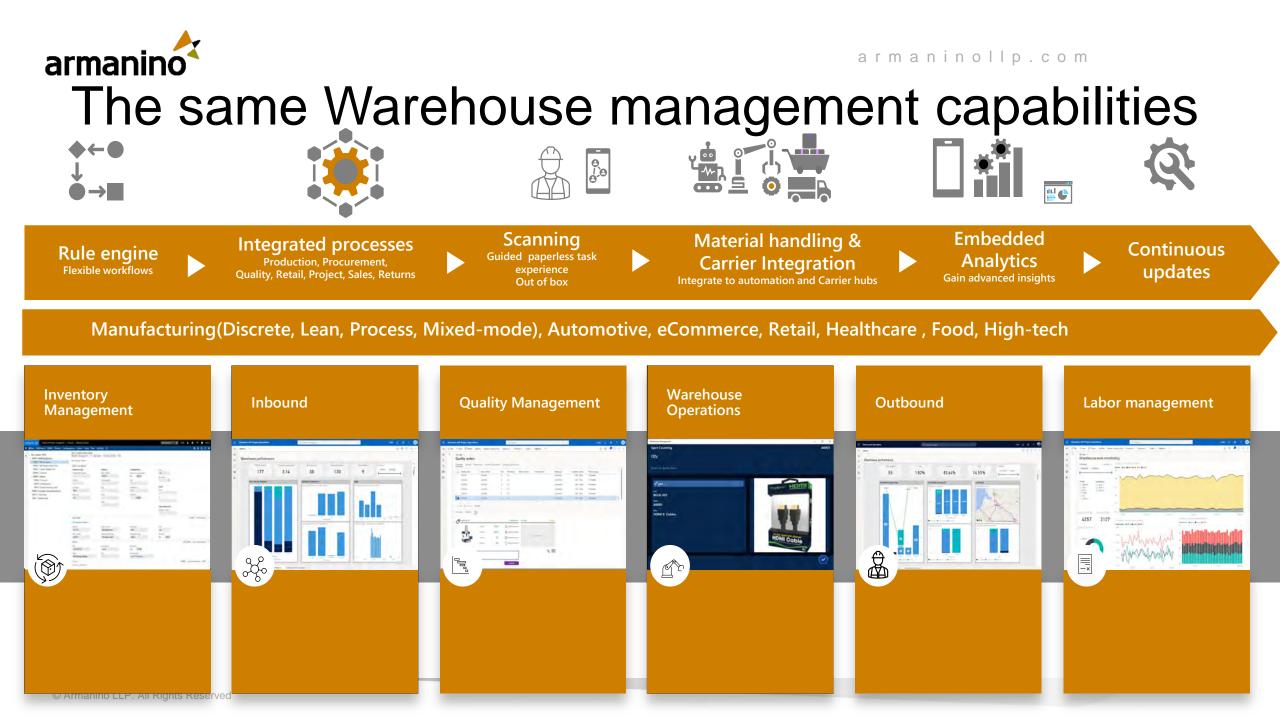

A mobile application that quickly consumes the inventory and supports inventory visibility, accuracy, and re-supply
