**Armanino offers customized cybersecurity program management services to help businesses manage the ever-changing threat of a data breach.**

After helping you assess and mitigate your risks, our experts manage the ongoing operations and implementation of your cybersecurity program, so you can focus on running your business.

#### The Challenge

In this digital age, for-profit and nonprofit organizations of all sizes face a real and increasing threat of cyberattack. Even a simple breach can mean a loss of customer data and intellectual property, and a damaged reputation, among other effects. This risk is compounded by the fact that most businesses do not have the time or resources to design and implement an appropriate cybersecurity program.

#### Our Solution

Armanino's Cybersecurity Program Management Services will establish your cybersecurity program, instill security governance, manage your day-to-day cyber activities, and communicate program status to your executive team and board. This allows you to focus your efforts on managing your operations and achieving your mission-critical objectives, while we work to alleviate your risk of a cyberattack and its resulting consequences.

Our team has the resources and experience to help you understand your cyber-related weaknesses and take the appropriate steps to mitigate them. Depending on your particular needs, our experts can aide your

cyber efforts through a range of program management services, including:

- Implementing recommendations from your security assessments, leveraging NIST, ISO 27K, PCI and COBIT frameworks
- Policies and procedures review
- Employee security training and awareness
- Internal control design and implementation
- Special projects (data security review, network security review, 3rd party management, etc.)
- Management of third-party specialists
- Program effectiveness testing
- Executive team and board reporting

While virtually every business is under a cybersecurity threat, each organization's situation is unique. We focus on understanding your particular risks and requirements, so we can appropriately tailor a cybersecurity program that fits those needs. Then, as your business changes, we help you adapt your program to fit your evolving environment.
