Analytics

Eric Thomas
Partner, Outsourcing

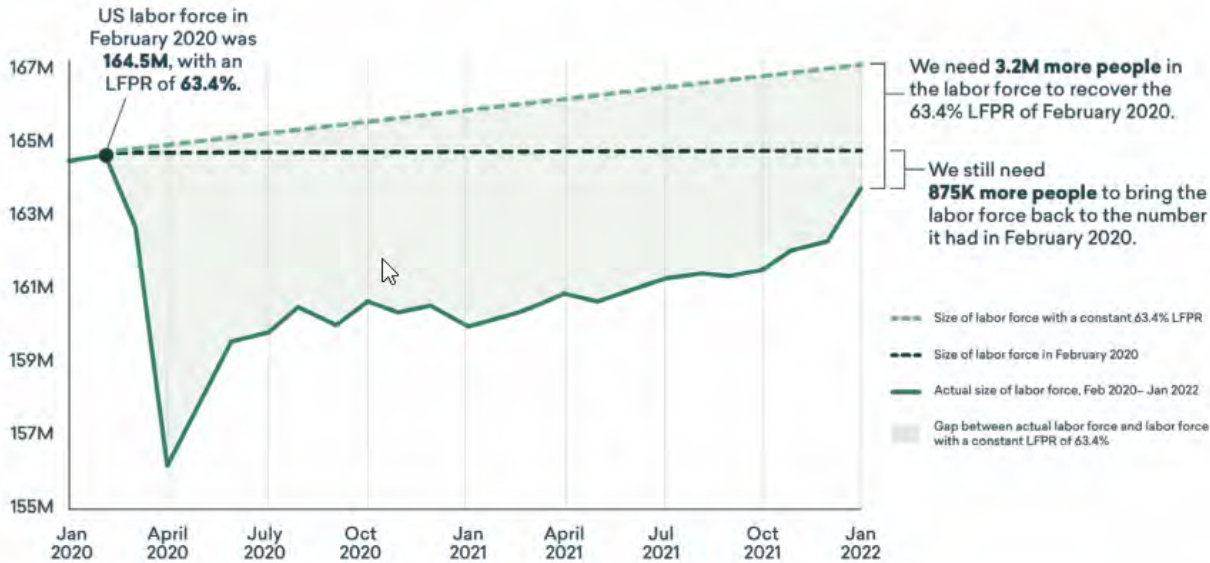

EXPLORING NEW AREAS

Agenda

- Current State
- What is Automation and what kinds?
- 13-week Cash Flow and Outsourcing

Demographic Drought – What’s Happening?

We Need 3.2 Million More Workers to Get Back on Track

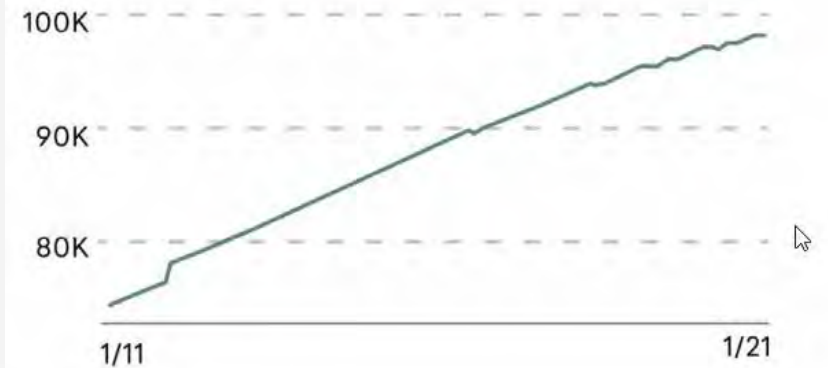

Source: Bureau of Labor Statistics, Current Population Survey, Seasonally Adjusted: February 2022

16-24 entering workforce

55+ Imminent retirees

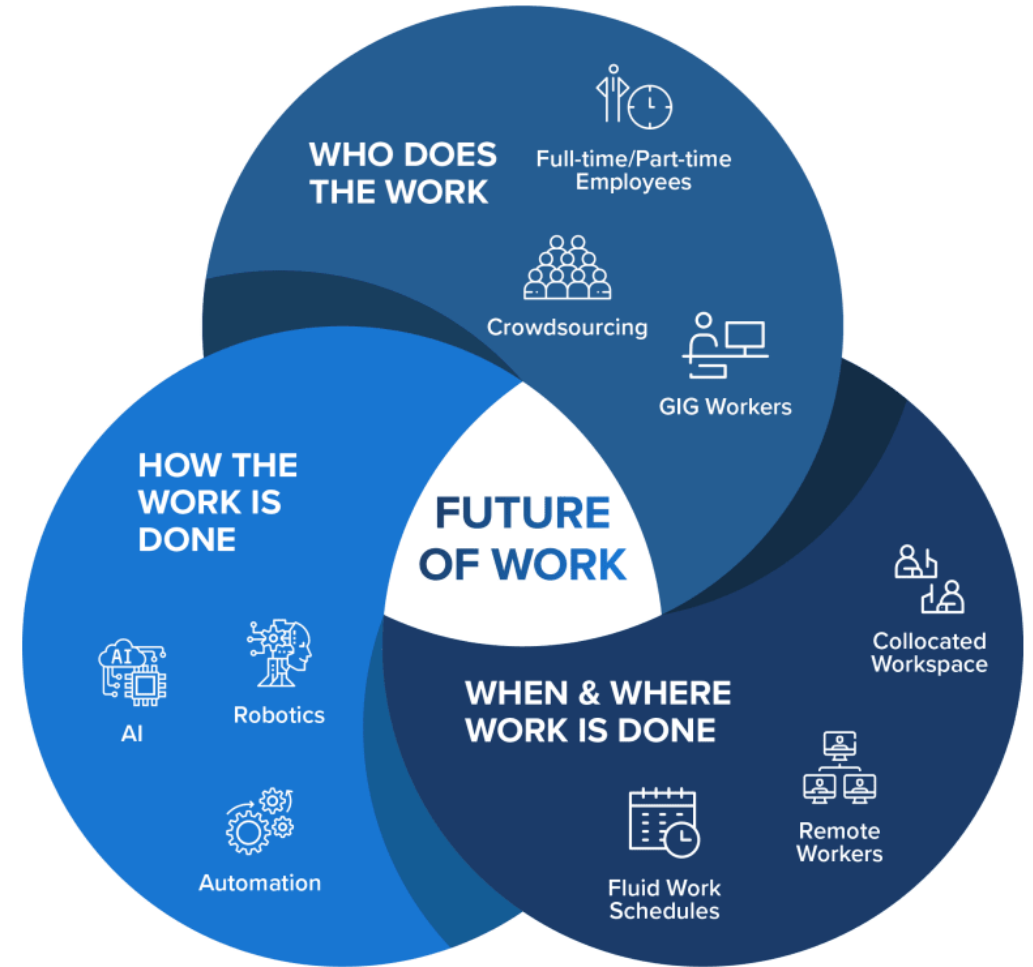

WHAT'S HAPPENING

The Changing Labor Market

“By 2025 ‘labor volatility’ will cause **40% of organizations** to report a material business loss.”

“**91%** of employees are frustrated with work tech, and **57%** feel legacy tech is holding them back”

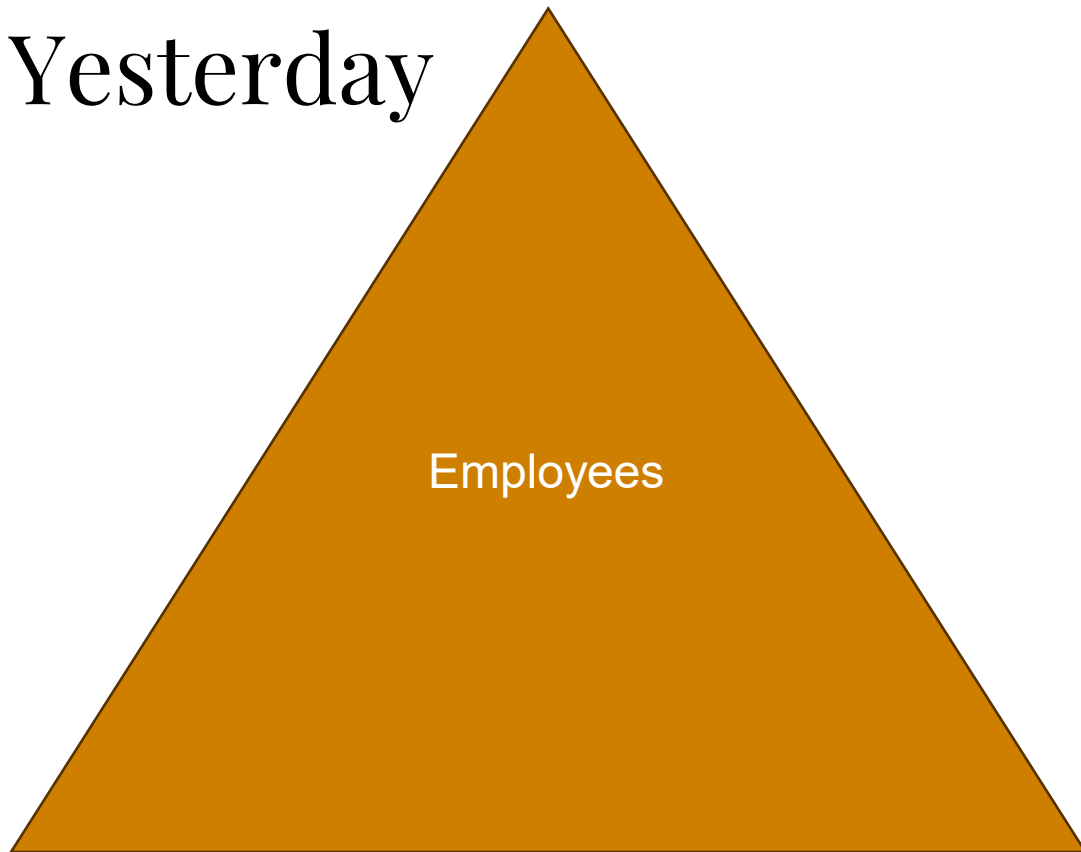

Freshwork [State Of WorkPlace Technology Report](#)

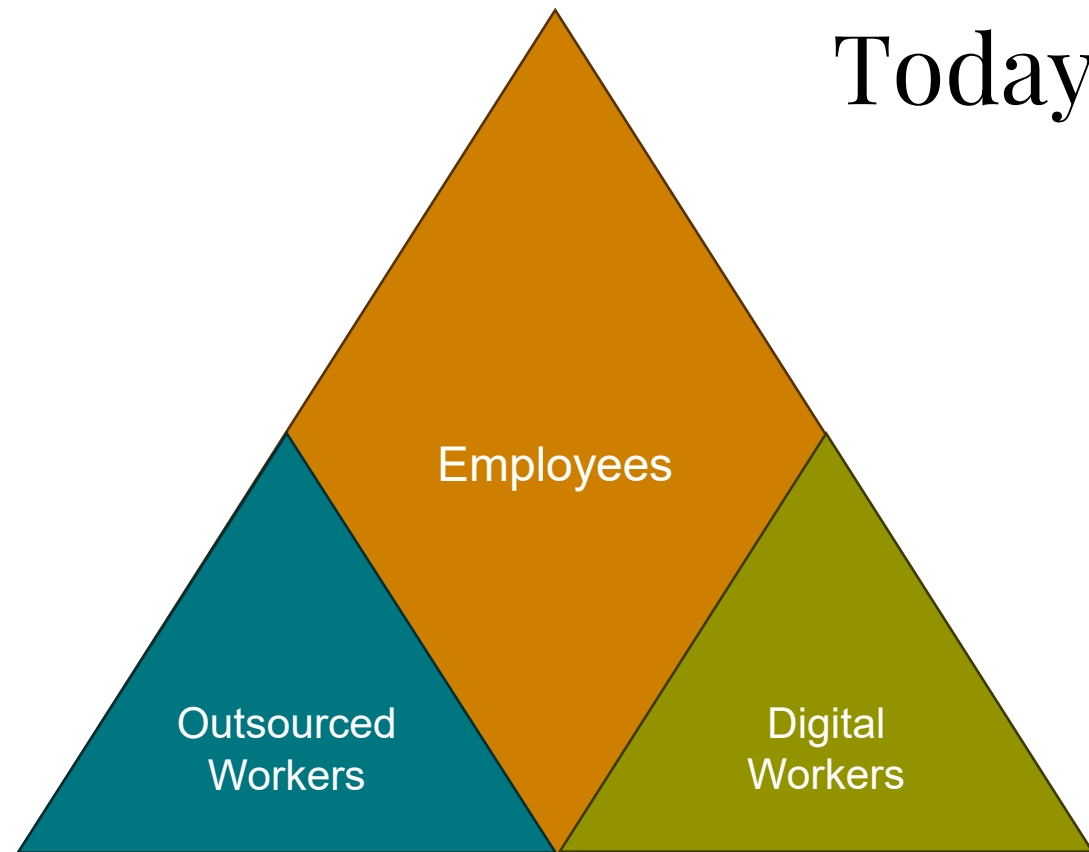

Today, millions of knowledge workers have greater freedom to decide when and where they work. (Image Source: shrm.org)

Integrated Workforce

Yesterday

Today

What
Should You
Automate?

The Pareto Principle

What is AI?

Artificial intelligence refers to the ability of a machine to simulate human intelligence and thought processes.

AI systems are programmed to demonstrate cognitive functions such as learning, problem-solving and reasoning

Computer Vision

AI powers systems that can automatically detect and classify objects in images and videos.

Natural Language Processing

AI enables systems to understand, interpret, and generate human languages.

Robotics

AI provides robots with sensing, reasoning, learning, and self-correction capabilities.

Predictive Analytics & Machine Learning

Allows learning from data and statistical algorithms to analyze historical data and make informed predictions about future events or trends

Rule-Based Intelligence

AI that follows a predetermined set of rules best used when the rules are straight forward and easy to define

Robotic Process Automation

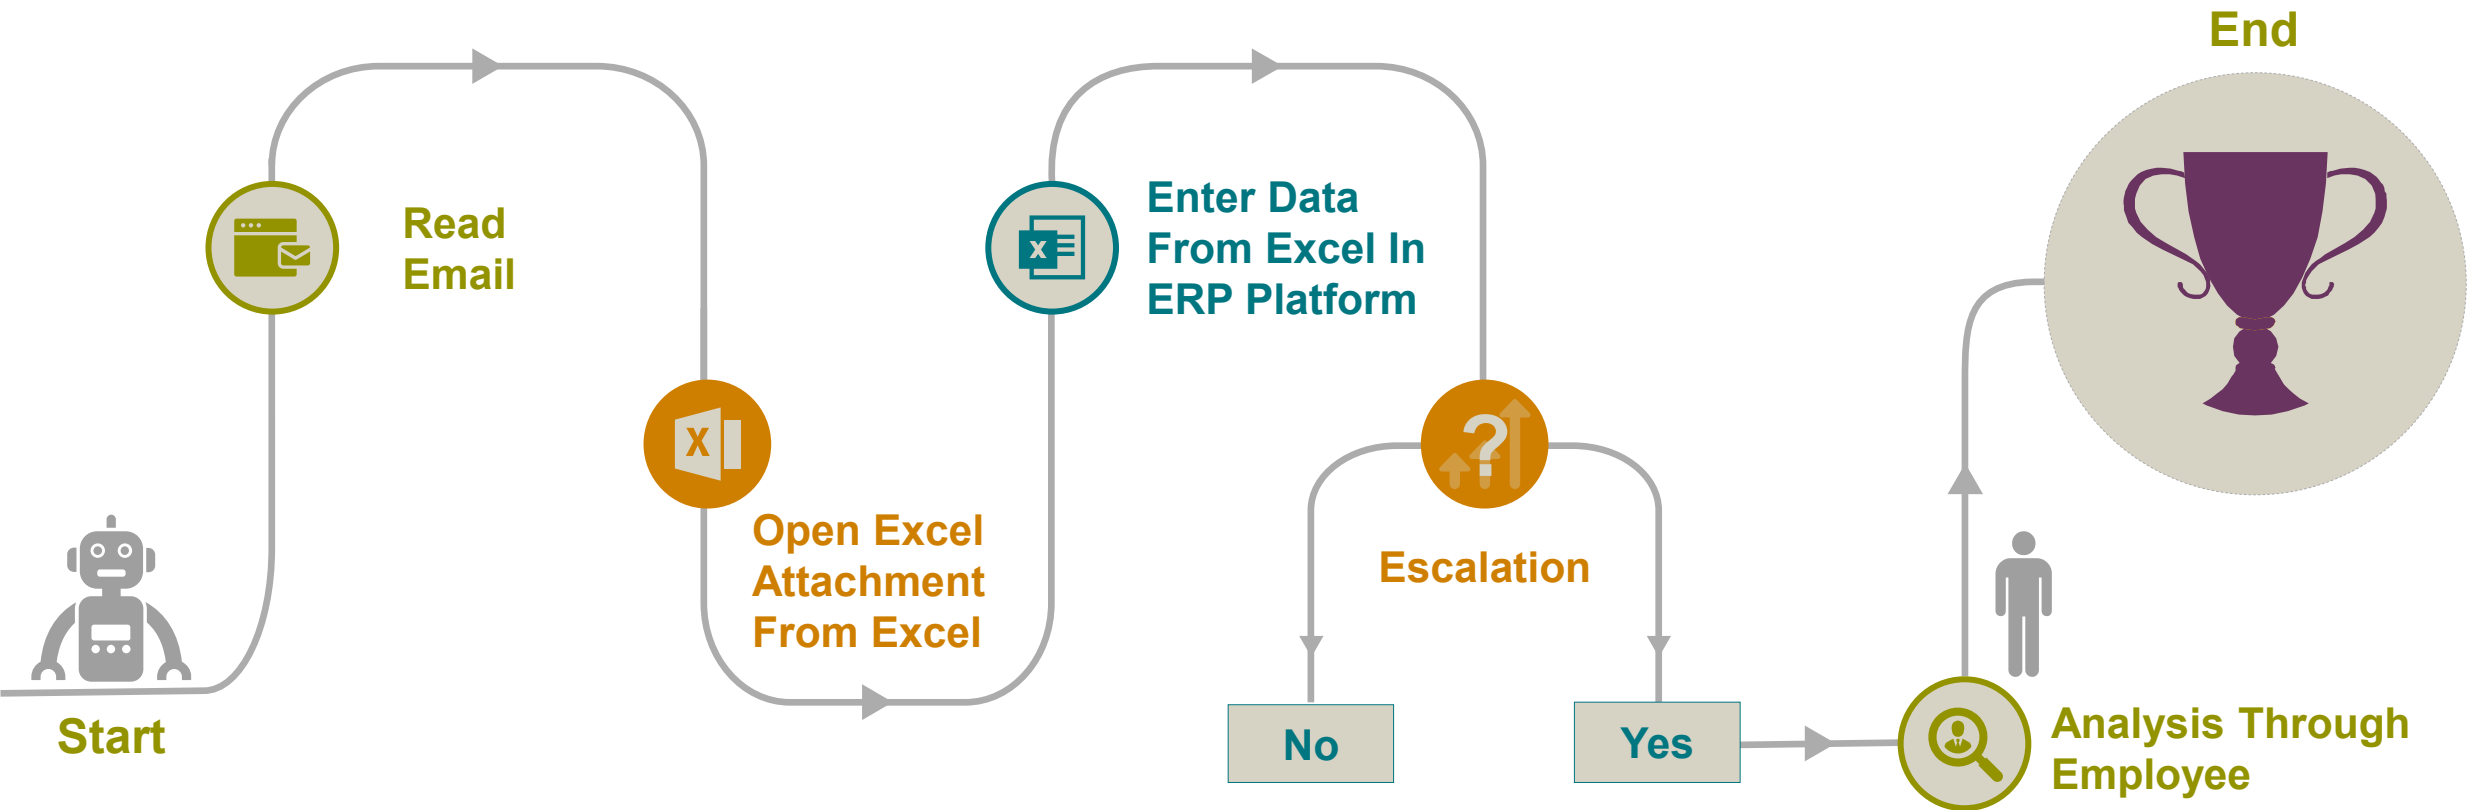

- AI “bots” that can be programmed to complete manual and repetitive work

RPA - Automation

The Digital Worker

How Does RPA Work?

What is Robotic Process Automation (RPA)?

Configurations That Automate Manual and Repetitive Tasks

Digital Workers That Integrate With Existing Software

Replication Of Desktop Actions

Driven By Simple Rules And Business Logic

Why Automation?

Reduce Manual Data Entry & Errors

Improve accuracy and quality with less human data entry errors or typos

Increase Productivity

Process cycle times are much faster compared to manual process approaches

Integrate & Sustain Legacy Systems

Integrate legacy systems with each other when traditional means, such as open APIs, are unavailable

Increase Availability

Digital workers operate on a regular, established schedule up to 24/7

Improve Employee Morale

Reduce tedious, painstaking tasks. Allow employees to focus more on rewarding work and the strategic growth of the organization

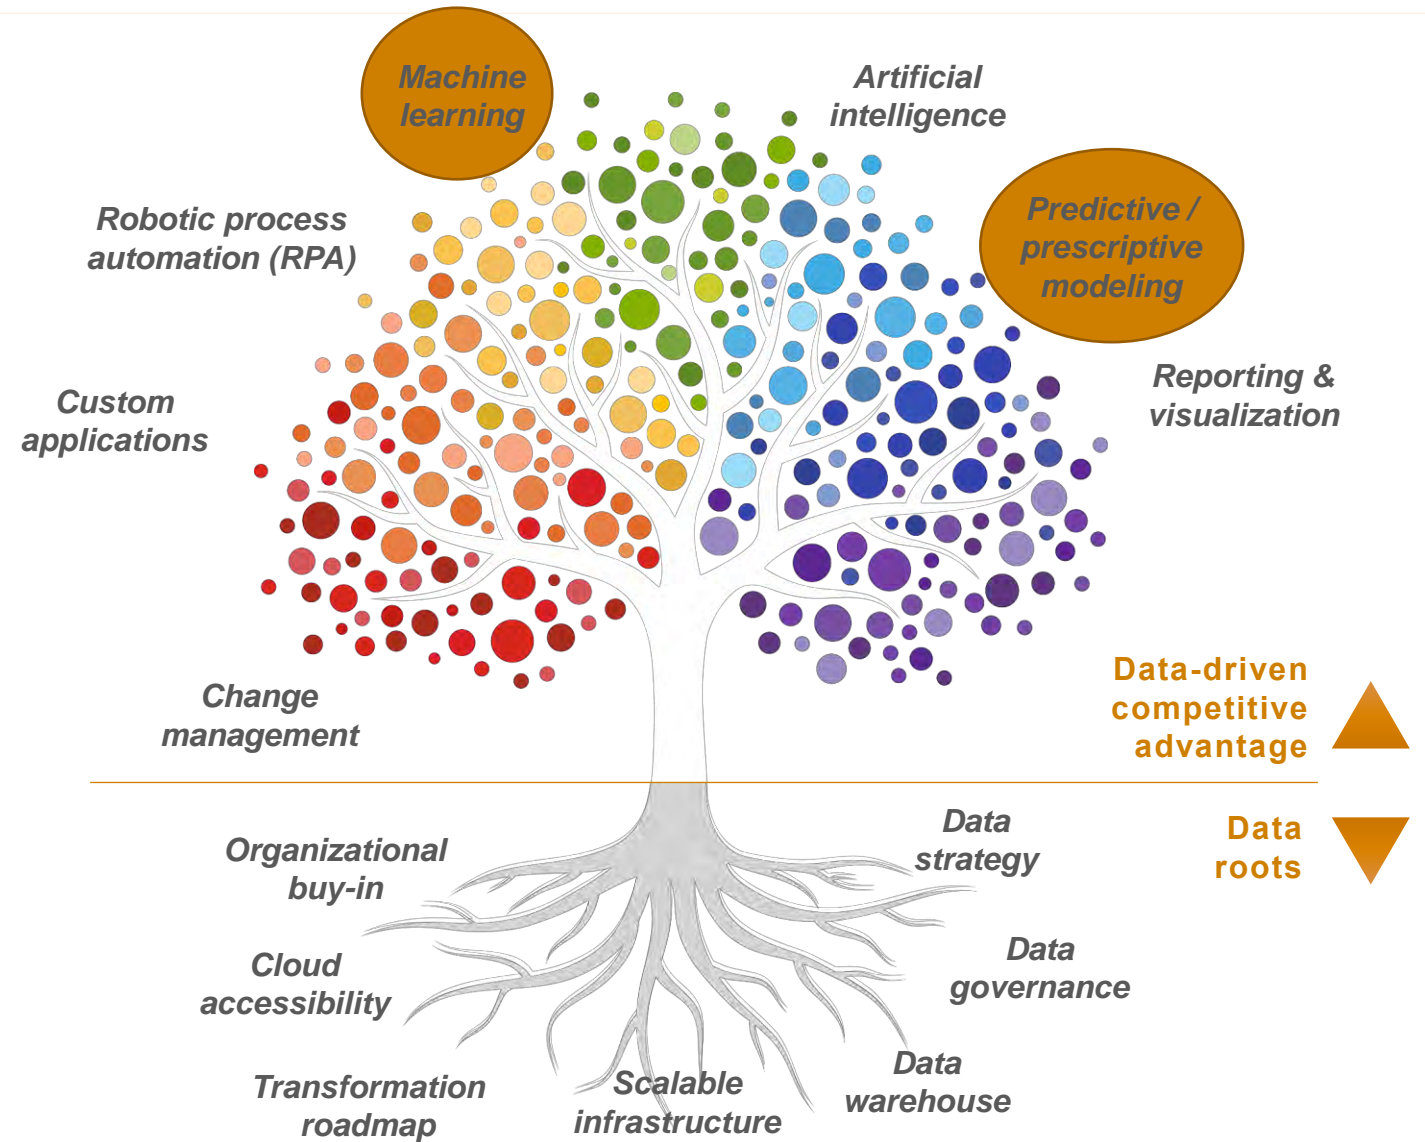

Scale & Manage Expenses

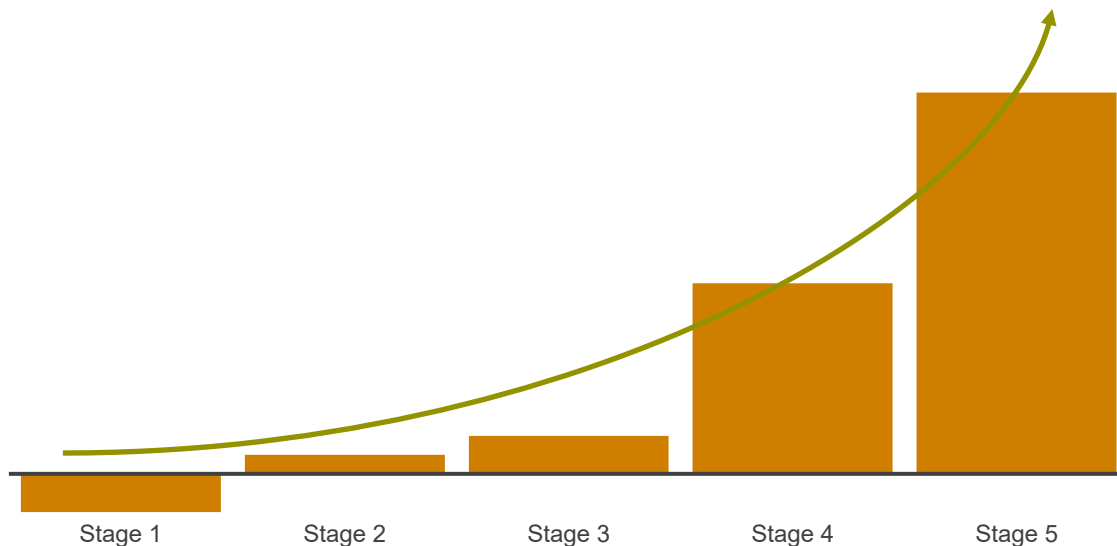

Scale without needing to add headcount. Reduce operating expenses through headcount reduction.

Building the roots to your digital transformation enables all transformative outcomes.

The journey to sustained competitive advantage begins with strong roots.

How to get started with Predictive Analytics?

Stage 1
Instinctive

Data is a hassle; we don't want to deal with it.
We wouldn't even know where to start.

Stage 2
Reactive

We have a data warehouse, but our data is still messy, unstructured, slow and historic.
We don't get many insights.

Stage 3
Informative

Our warehouse is scalable, but we don't have data strategy, governance or visualization in place.
We perform manual predictive analysis.

Stage 4
Predictive

We use accurate, readily available data to inform decision making in many areas.
We have identified the data we can use to gain insight and drive action.

Stage 5
Transformative

Real time, granular data and predictive modeling supports every business decision we make.
We now have a huge advantage over our competition.

Outsourcing

Process Life Cycle

**Stage 1 –
Outcome
focused**

**Stage 2 –
Definition &
Improvement**

**Stage 3 –
Documentation**

**Stage 4 –
Delegation**

**Stage 5 –
Outsourcing**

**Stage 5 –
Automation**

Effectiveness

Efficiency

AI-Enabled 13-Week Cash Flow

Manual 13-Week Cash Flow Forecast

Same process every week
Uses general ledger activity
In Excel
Highly dependent on formulas

Update with actuals, push projection out another week

Many validation steps to ensure confidence before publishing

More time spent updating than analyzing and forecasting

13-Week Cash Flow Forecast

- Start every week with **clarity** around **today's cash position** and a detailed weekly outlook for the upcoming quarter
- Empower your finance team** to make informed decisions and address potential cash flow challenges well in advance

AI-Based Banking Transaction Classification Engine

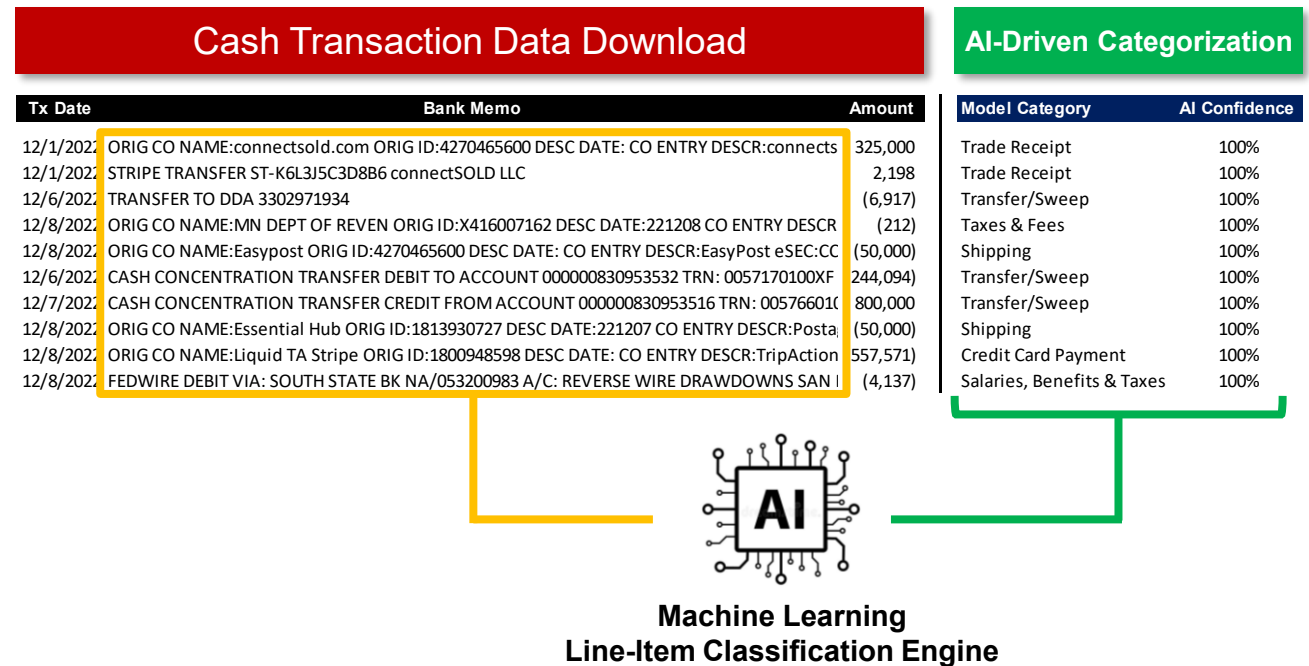

Source Cash Actuals from any ERP or Online Bank Portal

Features

- ✓ Feed **accounting** entries booked against cash
- ✓ Feed banking transaction CSV's **downloaded directly from online bank account**
- ✓ Machine-learning model categorizes 30k+ transactions in a matter of minutes
- ✓ Produces **data confidence score** – how sure was the AI in classifying each line item?

Benefits

- ✓ Historical cash flow analysis – incorporating weekly cash transactions over **past 12 months**
- ✓ Initial set up allows for **real-time** reporting on **today's cash balance** every Monday
- ✓ The more cryptic the data is, the more valuable AI becomes (**cannot automate bank memo “lookup” in Excel**)
- ✓ Allows for actionable insight to make key decisions each week
