

**National Vendor Speeds Order
Processing and Invoicing with Microsoft
Dynamics GP and CRM Connector**

Technical Case Study

At a Glance

A fast growing, green company based in Silicon Valley with five sales locations and two warehouses had outgrown its legacy accounting system and was searching for an overall ERP solution. Armanino provided a full-circle solution with Microsoft Dynamics CRM, Microsoft Dynamics GP and the CRM Connector.

Customer Profile

Relectric Supply is a national supplier of new and reconditioned used and obsolete circuit breakers, electrical distribution and control equipment. The Silicon Valley-headquartered firm is a leader in the electrical distribution and control e-marketplace, known throughout the industry as a technology front-runner. Specializing in the sale of hard-to-find circuit breakers, Relectric provides new and creative ways to source materials. The private, employee-owned California Corporation has 35 staff members and is a Certified California Green Business.

Software & Services

- Microsoft Dynamics CRM
- Microsoft Dynamics GP
- CRM Connector
- Implementation and Business Process Reengineering Consulting

Benefits

- Resource Synchronization
- Accounting Accuracy
- Rapid Order Processing
- Automated Invoicing

Modules

Automated Shipment Tracking/ Reconciliation; Credit Card Authorizations; Website Integration and Order Processing; Customized Multi-Warehouse Receiving and Order Fulfillment; Sales Tax; Credit Card Transactions; and Commissions

Business Challenge

Relectric Supply Company specializes in the sale of hard-to-find circuit breakers and electrical components, providing new, green and creative ways to source materials. Relectric grew from a small business founded in 2003 to become a national firm listed on the INC. 5000 in less than ten years. Since 2006, Relectric had used Microsoft Office Accounting, but found this entry-level accounting system had limitations including becoming slower and slower as the business grew. Relectric began the search for a more robust solution that would meet its immediate needs as well as those in the future.

“We had an outside sales organization. The system they were on did not communicate with our accounting system. There was a disconnect there,” said Anthony Robinson, Founder and CEO of Relectric Supply. “We realized a middleware solution was absolutely necessary to get data from the CRM system where our sales people live to our accounting system.”

As a Microsoft-centric organization, Relectric utilizes Office, SQL Server, and Microsoft IIS to host its websites in-house. The company chose Microsoft Dynamics GP and Microsoft CRM as its enterprise resource planning solution. This allowed them to retain a unified Microsoft systems platform and a familiar user interface for its staff.

Business Benefits

Relectric launched Microsoft Dynamics CRM and Microsoft Dynamics GP on January 1, 2011. Relectric teamed with Armanino to customize the CRM and GP applications to meet their business workflow needs, adding modules to accommodate:

- Automated shipment tracking/reconciliation
- Credit card authorizations
- Website integration and order processing
- Multi-warehouse receiving and order fulfillment systems

Instead of working in multiple systems and becoming bogged down in data redundancy, Relectric users of all job functions now trace account and transaction status from start to finish due to the seamless integration of CRM and GP. While using its previous accounting system, Relectric lacked controls for “cost of goods sold” and was unable to adequately track serial numbers. This led to a significant number of errors in system reporting. Now, Dynamics GP locks down the inventory, tracking serial numbers in and out of the system, and keeps the general ledger accurate.

Relectric has 60,000 customers and 100,000 items in inventory. Prior to the Microsoft Dynamics CRM and GP implementation, it took 30 seconds just for the accounting system to return an inventory onscreen. Now, processing an order end-to-end is immediate and seamless.

“It’s all very fast, updating on an almost real-time basis, every 45 seconds. We see things flowing back and forth very efficiently and haven’t had any issues with connectivity,” said Robinson.

Armanino helped Relectric to bridge the data gap between CRM and Dynamics GP by leveraging the Connector for Dynamics. More than simply keeping the company’s accounts and addresses synchronized, orders are now:

1. Placed in CRM
2. Submitted to ERP
3. Fulfilled and invoiced in ERP
4. Returned as CRM Invoices, providing status visibility all along the way

This collaborative process brings the sales process full-circle, increasing scalability, data accuracy, and customer satisfaction. Relectric also uses ISV applications to support its sales efforts, including Avalara for sales tax, Nodus for credit card transactions and Ethotech for commissions. It saves immeasurable time in the processing of orders from Relectric’s five sales sites and two distribution facilities nationwide.

“It’s all very fast, updating on an almost real-time basis... We see things flowing back and forth very efficiently and haven’t had any issues with connectivity.”

“The sales team members don’t have to go anywhere other than CRM to get the information they need,” said Robinson. “A big benefit from the conversion process is the ability to have almost hands-off invoicing. Prior to this upgrade, an invoicing person individually billed each customer and processed each credit card one by one.”

Anthony Robinson
Founder and CEO
Relectric

The Microsoft Dynamics GP, CRM and CRM Connector integration has assisted Relectric in achieving greater focus on its key performance indicators and positioning this innovative, sustainable company for greater future growth.

“The CRM Connector has allowed us to boost efficiencies such that we are working on other tools and building out more reports versus spending time managing the transfer of data from one place to the other,” concluded Robinson.

Topline Benefits

- Hands-off invoicing
- Increase sales process speed, accuracy and customer satisfaction
- Elimination of data redundancy
- Improved communication between sales, fulfillment and finance teams

Microsoft Dynamics

Microsoft Dynamics is a line of integrated, adaptable business management solutions that enables you and your people to make business decisions with greater confidence. Microsoft Dynamics works like familiar Microsoft software such as Microsoft Office, which means less of a learning curve for your people, so they can get up and running quickly and focus on what's most important. And because it is from Microsoft, it easily works with the systems that your company already has implemented. By automating and streamlining financial, customer relationship, and supply chain processes, Microsoft Dynamics brings together people, processes, and technologies, increasing the productivity and effectiveness of your business, and helping you drive business success.
